

Figure V.2: Median execution time (ms) per key-establishment algorithm. RSA-2048 is approximately 106× slower than ML-KEM-512 and 186× slower than ECDH P-256

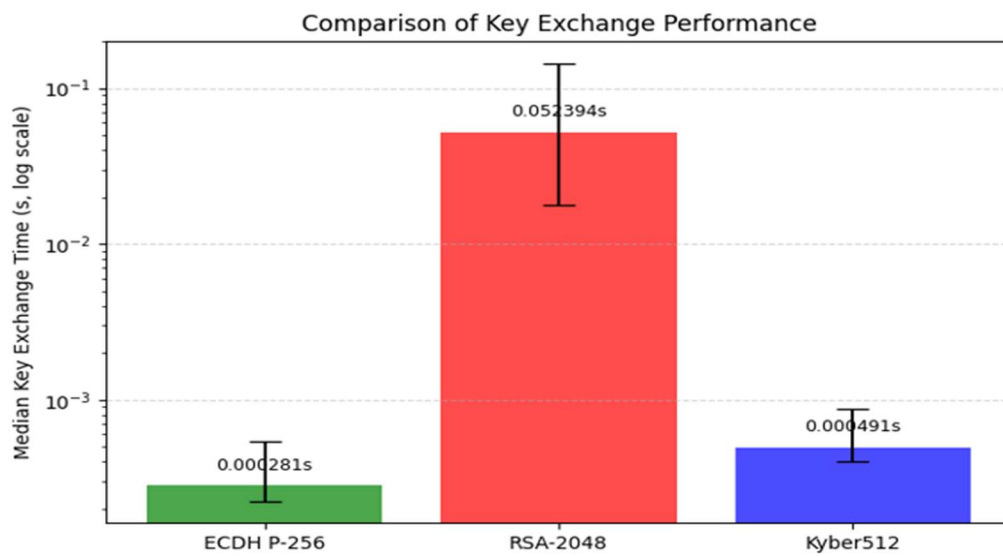

Figure V.3: Hash function throughput (MB/s) at 1 KB and 1 MB input sizes. SHA-256 outperforms SHA3-256 and SHAKE256 by approximately 19% at 1 MB due to hardware SHA-NI acceleration.
